

# VEHICLES WITH ATRS™ INTEGRATION

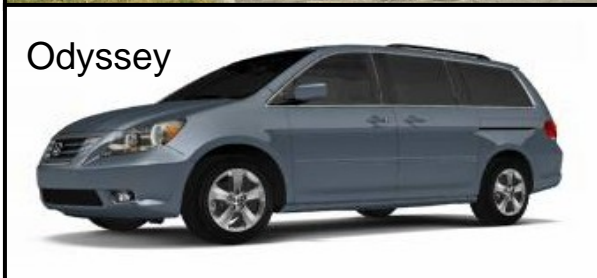

Shown in a 2005 Dodge Caravan

ATRS, Automated Transport and Retrieval System, is a revolutionary transportation mobility solution that integrates robotics and automation technology with existing mobility products. It will enable those with limited mobility who use powered wheelchairs to independently load and unload their wheelchairs from a wide range of standard passenger vehicles that fully conform to NHTSA safety requirements.

ATRS will provide a driver the ability to use their vehicle without the assistance of a caregiver. For passengers, ATRS will relieve a significant burden from their caregivers of loading and unloading the person from the vehicle and then storing their power wheelchair.

# **A Technology- Based Alternative to Van Conversions**

Please contact Freedom Lift  
at: (800) 755-2856 for more  
information on these vehicles
